Instructions:

Evaluate the homework against the outlined criteria in the below rubric, assigning a rating to each criterion. Add points earned across all criteria and convert the total points to a letter grade, assigning a “+” or “-” letter grade designation at your discretion.

A (+/-)	75+	C (+/-)	35-54	F (+/-)	<15
B (+/-)	55-74	D (+/-)	15-34		

Notes:

The deployed assignment utilizes the **OpenWeatherMap API** and the **citipy** library to complete the challenge. The source code should also be deployed to **Github** or **Gitlab**.

Rubric for WeatherPy:

	Mastery 20 points	**Approaching Mastery 15 points**	**Progressing 10 points**	**Emerging 5-0 points**	**Incomplete**
API Querying	✓ API Key was imported from external script and used as variable ✓ Correctly loops over the list of cities ✓ No errors interrupt the API call loop ✓ Prints out the current number and name of the city they are currently retrieving data for	✓ API Key was imported from external script and used as variable ✓ Correctly loops over the list of cities ✓ No errors interrupt the API call loop ✓ Does not print out the current number and name of the city they are currently retrieving data for	✓ API Key is hardcoded rather than stored in external file ✓ Correctly loops over the list of cities ✓ Some errors occur during the api call loop ✓ Does not print out the current number and name of the city they are currently retrieving data for	✓ API Key is hardcoded rather than stored in external file ✓ Loops over a static range rather than the length of the cities list ✓ Loop throws too many errors to complete ✓ Does not print out the current number and name of the city they are currently retrieving data for	No submission was received -OR- Submission was empty or blank -OR- Submission contains evidence of academic dishonesty
Data Modeling	✓ A pandas dataframe is created and saved to a .csv from the data retrieved from the API. The dataframe contains 500+ rows in all of the following columns: ✓ City latitude ✓ City longitude ✓ Max temperature ✓ Humidity ✓ Cloud coverage ✓ Wind speed ✓ City country ✓ City datetime	✓ A pandas dataframe is created but not saved to a .csv from the data retrieved from the API. The dataframe contains 500+ rows in 4-6 of the following columns: ✓ City latitude ✓ City longitude ✓ Max temperature ✓ Humidity ✓ Cloud coverage ✓ Wind speed ✓ City country ✓ City datetime	✓ A pandas dataframe is created, but not saved to a .csv from the data retrieved from the API. The dataframe contains 300-500 rows or only has 2-3 of the following columns: ✓ City latitude ✓ City longitude ✓ Max temperature ✓ Humidity ✓ Cloud coverage ✓ Wind speed ✓ City country ✓ City datetime	✓ A pandas dataframe is created, but not saved to a .csv from the data retrieved from the API. ✓ The dataframe contains 200 or less rows or only has 1 column of data: -OR- ✓ A pandas dataframe is never created	
Plot	A plot is created with a title, axis labels and saved as a .png file for	A plot is created for all of the following, but may omit a title, axis	A plot is created for 2-3 of the following, and may omit a title, axis	✓ 1 plot is created, but may be incorrect	

Creation	all of the following: ✓ `Latitude vs Temp` ✓ `Latitude vs Humidity` ✓ `Latitude vs Cloudiness` ✓ `Latitude vs Wind Speed`	labels, or both: ✓ `Latitude vs Temp` ✓ `Latitude vs Humidity` ✓ `Latitude vs Cloudiness` ✓ `Latitude vs Wind Speed`	labels, or both: ✓ `Latitude vs Temp` ✓ `Latitude vs Humidity` ✓ `Latitude vs Cloudiness` ✓ `Latitude vs Wind Speed`	-OR- ✓ No plots are created	
Data Analysis	✓ Analysis correctly describes 3 observable trends ✓ Analysis provides sound reasoning to back up why all 3 trends are occurring.	✓ Analysis correctly describes 3 observable trends ✓ Analysis provides some reasoning to back up why the trends are occurring.	✓ Analysis describes only 2 observable trends ✓ Analysis provides little to no reasoning to back up why trends are occurring.	✓ Analysis only describes 1 observable trend ✓ Analysis is missing and/or does not contain any evidence to support their claim(s)
